Coptic	96
Hebrew	97
Appendix 2: Beta Code Citation System.....	98
Appendix 3: Reserved Escapes	99

Introduction

Beta Code is a character and formatting encoding convention developed specifically to enable the accurate digital representation of ancient Greek texts (and other archaic languages) on an ASCII-based system. It was developed by David W. Packard in the late 70's and adopted by the TLG® in 1981. Beta has become the standard for encoding polytonic Greek and has also been used by a number of other projects such as Perseus, the Packard Humanities Institute, the Duke collection of Documentary Papyri and the Greek Epigraphy Project at Cornell and the Ohio State University.

The Beta Code Manual has undergone a number of revisions. Earlier versions have been disseminated in hard copy and posted online.

This edition (hereafter called *The 2010 TLG® Beta Code Manual*) supersedes any previous versions.

Notes

- Grey Boxes These indicate deprecated Beta Codepoints. Light shading indicates a deprecated character that is currently in the corpus. Dark shading indicates a deprecated character that is not in the corpus.
- Red Text These indicate codepoints which have been updated since the last edition of the TLG Beta Code Quick Reference Guide.
- Green Bold Text These indicate codepoints which have been proposed for inclusion in the next update to the Unicode Standard. Caution should be used when employing these characters because definitions and codepoints may change.

Key

- abbr abbreviated word that cannot currently be rendered in Unicode. The PUA should be used for these characters.
- idiosyn idiosyncratic characters that do not have Unicode codepoints. The PUA should be used for these characters.
- markup characters with Unicode codepoints but which require additional markup for them to display correctly.
- rare rare characters that do not have Unicode codepoints. The PUA should be used for these characters.
- non-TLG characters reserved for other projects and unused by the TLG. The TLG Project is not in possession of information about the definition or representation of these characters.

Naming Conventions

Where there is a Unicode equivalent for the Beta Code, we have given the Unicode name. Where there is no Unicode equivalent for the Beta Code we have given the TLG's preferred name.

Key

- indicates official Unicode alternative character names
- indicates the TLG's preferred name or alternative TLG names. These are given when the Unicode name is not clear enough to indicate the TLG's use of the character.
- informational text to help further clarify the use of a character.

Composing and Precomposing Forms

The UTC recommends the use of composing characters for keying polytonic Greek. Wherever possible we use composing characters on our website. However, most browsers do not yet render composing characters adequately. For these browsers we have no option but to use precomposed characters for the time being. The UTC has deemed this an acceptable stop-gap solution. Once a majority of applications can render the composing characters adequately, the precomposed characters will become deprecated.

The Unicode precomposed forms of Greek letters are not listed in this guide. See [TLG Guide to Unicode Precomposed Greek Forms](#) for a comprehensive overview.

Beta Escape Codes

Information about the printed text, such as editorial material, citation information, etc., which cannot be conveyed by the alphabetic encoding system is represented by various **escape codes**. All escape codes are in the form of a single symbol followed by a numeric modifier. Each symbol represents a category of information; numeric modifiers subdivide the category into its specific components. So a square bracket stands for the various kinds of brackets which appear in a text: a square bracket by itself ([]) indicates a normal square bracket ([]); a square bracket followed by numeral one ([1]) indicates a parenthesis (()); when followed by numeral two ([2]), an angle bracket (< >); when followed by numeral three ([3]), a brace ({ }).

In general, the escape codes are organized so as to suggest the class of information being presented; consultation of the tables below will then give specific information when needed. Thus the reader who sees §4 may have to consult the table to find that the text following is in superscript Greek, but he or she will very soon learn that the dollar sign indicates a Greek font shift and not, for instance, an astrological symbol. Nonetheless, editors have often used *sigla* in idiosyncratic fashion. Efforts to impose uniformity on their use (e.g. Bidez & Drachmann 1938) have not prospered. The categories offered here should, therefore, be used with appropriate caution; users should always consult the text edition. Some instances of idiosyncratic usage are noted in comments.

The null character (`) is used to separate a Beta escape code when a numeral follows immediately. So &4`1& is used to represent the Indic-Arabic numeral one in superscript Roman font.

This manual is divided into three sections:

Section 1 outlines the characters used to represent the alphabets, basic punctuation and basic font formatting. (Beta Code Categories § and %)

Section 2 outlines the further Beta Code escapes for page formatting, text markup and text formatting. (Beta Code Categories ^, @, { and <)

Section 3 outlines the further Beta Code escapes for punctuation and further characters. (Beta Code Categories ", [, %, and #).

Beta	Unicode	Name	Information
------	---------	------	-------------

1. Alphabets and Basic Punctuation

1.1. Greek

*A A	0391 03B1	Α α	Greek Capital Letter Alpha Greek Small Letter Alpha	See also: #660
*B B	0392 03B2	Β β	Greek Capital Letter Beta Greek Small Letter Beta	See also: #661
*C C	039E 03BE	Ξ ξ	Greek Capital Letter Xi Greek Small Letter Xi	See also: #629
*D D	0394 03B4	Δ δ	Greek Capital Letter Delta Greek Small Letter Delta	See also: #63, #630
*E E	0395 03B5	Ε ε	Greek Capital Letter Epsilon Greek Small Letter Epsilon	See also: #587
*F F	03A6 03C6	Φ φ	Greek Capital Letter Phi Greek Small Letter Phi	See also: #577
*G G	0393 03B3	Γ γ	Greek Capital Letter Gamma Greek Small Letter Gamma	See also: #574
*H H	0397 03B7	Η η	Greek Capital Letter Eta Greek Small Letter Eta	See also: #65, #642
*I I	0399 03B9	Ι ι	Greek Capital Letter Iota Greek Small Letter Iota	See also: #60, #580
*K K	039A 03BA	Κ κ	Greek Capital Letter Kappa Greek Small Letter Kappa	See also: #631, #806
*L L	039B 03BB	Λ λ	Greek Capital Letter Lambda Greek Small Letter Lambda	See also: #619
*M M	039C 03BC	Μ μ	Greek Capital Letter Mu Greek Small Letter Mu	See also: #69, #579 See also: #677
*N N	039D 03BD	Ν ν	Greek Capital Letter Nu Greek Small Letter Nu	See also: #583
*O O	039F 03BF	Ο ο	Greek Capital Letter Omicron Greek Small Letter Omicron	See also: #628
*P P	03A0 03C0	Π π	Greek Capital Letter Pi Greek Small Letter Pi	See also: #62, #603
*Q Q	0398 03B8	Θ θ	Greek Capital Letter Theta Greek Small Letter Theta	See also: #581
*R R	03A1 03C1	Ρ ρ	Greek Capital Letter Rho Greek Small Letter Rho	See also: #578
*S S	03A3 03C3	Σ ς	Greek Capital Letter Sigma Greek Small Letter Final Sigma ¹	See also: #821
S1	03C3	σ	Greek Small Letter Medial Sigma	
S2	03C2	ς	Greek Small Letter Final Sigma	
*S3 S3	03F9 03F2	Ϛ ϛ	Greek Capital Lunate Sigma Symbol Greek Lunate Sigma Symbol	See also: #570
*T T	03A4 03C4	Τ τ	Greek Capital Letter Tau Greek Small Letter Tau	See also: #652, #805, #811, #837
*U U	03A5 03C5	Υ υ	Greek Capital Letter Upsilon Greek Small Letter Upsilon	See also: #602
*V V	03DC 03DD	Ϝ ϝ	Greek Letter Digamma Greek Small Letter Digamma	See also: #567

¹ The rendering of the Beta Code S into medial and final sigmas depends on its position in the word.

*Χ Χ	03A7 03C7	Χ χ	Greek Capital Letter Chi Greek Small Letter Chi See also: #66, #458, #651
*Ψ Ψ	03A8 03C8	Ψ ψ	Greek Capital Letter Psi Greek Small Letter Psi See also: #663
*Ζ Ζ	0396 03B6	Ζ ζ	Greek Capital Letter Zeta Greek Small Letter Zeta See also: #585, #694

1.2. Combining Diacritics

) 02BC	0313 02BC	◌̂ ◌̈́	Combining Comma Above ² ‣ Combining Smooth Breathing Modifier Letter Apostrophe ³ ‣ Non-Combining Smooth Breathing	See also: %92, %177
(02BD	0314 02BD	◌̃ ◌̈́	Combining Reversed Comma Above ‣ Combining Rough Breathing Modifier Letter Reversed Comma ⁴ ‣ Non-Combining Rough Breathing	See also: %91, %178
/ 00B4	0301 00B4	◌̇ ◌̇	Combining Acute Accent Acute Accent ⁵ ‣ Non-Combining Acute Accent	
= 1FC0	0342 1FC0	◌̆ ◌̆	Combining Greek Perispomeni ⁶ ‣ Combining Circumflex Accent Greek Perispomeni ⁷ ‣ Non-Combining Circumflex Accent	See also: %128
\ 0060	0300 0060	◌̈́ ◌̈́	Combining Grave Accent Grave Accent ⁸ ‣ Non-Combining Grave Accent	
+ 00A8	0308 00A8	◌̆ ◌̆	Combining Diaeresis Diaeresis ‣ Non-Combining Diaeresis	See also: %97
 1FBE	0345 1FBE	◌̆ ◌̆	Combining Greek Ypogeegrammeni ‣ Combining Iota Subscript Greek Prosgeegrammeni ‣ Non-Combining Iota Subscript	
? 0323	0323	◌̆	Combining Dot Below ⁹	See also: %179

² The non-combining forms of the Beta Codes), (, /, + and | are given here for ease of reference only. The Beta Codes themselves map only onto the combining Unicode codepoints.

³ 'spacing clone of Greek smooth breathing mark' (*Unicode Standard 5.0*, p. 26). 1FBD Greek Koronis and 1FBE Greek Psili are duplicates of this character and should not be used.

⁴ 'spacing clone of Greek rough breathing mark' (*Unicode Standard 5.0*, p. 26). 1FFE Greek Dasia is a duplicate of this character and should not be used.

⁵ 0384 Greek Tonos and 1FFD Greek Oxia are duplicates of this character and should not be used.

⁶ 0342 is the combining diacritic the TLG uses for the Greek Circumflex Accent, it has a different glyph variant range from 0302 Combining Circumflex Accent. 0302 is the combining diacritic the TLG recommends for use with Latin text.

⁷ 1FC0 Greek Perispomeni shares the same glyph range as 0342 Combining Greek Perispomeni and so is to be used as its non-combining clone. 005E Circumflex Accent is the non-combining diacritic the TLG recommends for use with Latin text

⁸ 1FEF Greek Varia is a duplicate of this character and should not be used.

⁹ The *Unicode Standard 5.0* does not have a non-combining clone for Combining Dot Below. Currently, 002E Period represents a 'best fit' solution.

1.2. Latin

A	0041	A	Latin Capital Letter A
a	0061	a	Latin Small Letter A
B	0042	B	Latin Capital Letter B
b	0062	b	Latin Small Letter B
C	0043	C	Latin Capital Letter C
c	0063	c	Latin Small Letter C
D	0044	D	Latin Capital Letter D
d	0064	d	Latin Small Letter D
E	0045	E	Latin Capital Letter E
e	0065	e	Latin Small Letter E
F	0046	F	Latin Capital Letter F
f	0066	f	Latin Small Letter F
G	0047	G	Latin Capital Letter G
g	0067	g	Latin Small Letter G
H	0048	H	Latin Capital Letter H
h	0068	h	Latin Small Letter H
I	0049	I	Latin Capital Letter I
i	0069	i	Latin Small Letter I
J	004A	J	Latin Capital Letter J
j	006A	j	Latin Small Letter J
K	004B	K	Latin Capital Letter K
k	006B	k	Latin Small Letter K
L	004C	L	Latin Capital Letter L
l	006C	l	Latin Small Letter L
M	004D	M	Latin Capital Letter M
m	006D	m	Latin Small Letter M
N	004E	N	Latin Capital Letter N
n	006E	n	Latin Small Letter N
O	004F	O	Latin Capital Letter O
o	006F	o	Latin Small Letter O
P	0050	P	Latin Capital Letter P
p	0070	p	Latin Small Letter P
Q	0051	Q	Latin Capital Letter Q
q	0071	q	Latin Small Letter Q

¹⁰ "00B7 · is the preferred character" (*Unicode Standard 5.0*, p. 34). 0387 should not be used for 'Greek middle dot (ano teleia)'.

¹¹ "this, and not 037E ; , is the preferred character for 'Greek question mark'" (*Unicode Standard 5.0*, p. 4).

¹² "this is the preferred character to use for apostrophe" (*Unicode Standard 5.0*, p. 167). 0027 should not be used for 'apostrophe', it exists in the Unicode Standard primarily to allow backward compatibility with ASCII.

¹³ 2010 is the correct character for 'hyphen'. 002D is ambiguous between 'hyphen' and 'minus' in meaning and should not be used. For 'EN dash', see %19.

¹⁴ Not to be confused with 'hyphen' (-) or 'EN dash' (%19).

Beta	Unicode	Name	Information
{75		Image Cross-Reference	Definition: marks up cross-references to images, e.g. diagrams and charts Status: allowed Usage: in corpus
{76		Potential Text Cross-Reference	Definition: marks up text which is potentially a cross-reference to another point in the same text or to an external text. Ultimately, {76s are converted to {74s. Status: allowed Usage: in corpus See also: {74
{80		Speaker Designation	Definition: speaker designation Status: allowed Usage: in corpus
{90		Marginal Text → used for text longer than 2 words	Definition: text printed in the margin. Used for text longer than 2 words Status: allowed Usage: in corpus See also: {2
{95		Colophon	Definition: denotes colophons Status: allowed Usage: in corpus
{100		TLG Editorial Text	Definition: marks up text added by the TLG because the original was unindexable. Used in conjunction with {101. Status: allowed Usage: in corpus , especially in musical texts, e.g. 9034.001 See also: {101
{101		TLG Editorial Text	Definition: used to mark original text which is preserved for textual searches, but not indexed, Used in conjunction with {100 which indicates the normalised version. Status: allowed Usage: in corpus , especially in musical texts, e.g. 9034.001 See also: {100

2.3. < – Text Formatting

< >	0305	◌̄	Combining Overline Definition: combining overline; 1) may appear over numbers; 2) may appear over a string of letters under discussion in a text, e.g. the ending -μῖ when discussed in isolation in a grammatical text may appear as -μῖ̄ Status: allowed Usage: in corpus See also: %184
<1 >1	0332	◌̅	Combining Underline Definition: underlined text; 1) alternative to italic text; 2) denote cited text, e.g. Stephanus (0724 002), Tatianus (1766 001), Origenes (2042 039), Olympiodorus Diaconus (2865 001), Anonymi in Aristotelis Librum de Interpretatione (4165 001); 3) denote the portions of the text attested in the one papyrus witness in Origenes (2042 001); 4) denote reading from earlier copies of the papyrus in Didymus Caecus (2102 001); 5) denote words attested in dispreferred witnesses in Photius (4040 001) Status: allowed Usage: in corpus

Thesaurus Linguae Graecae – Beta Code Manual

Beta	Unicode	Name	Information
<2 >2	2035 2032	Left Interlinear Text Marker Bracket ¹⁶ Right Interlinear Text Marker Bracket	Definition: denote text that is interlinear, possibly scribal interpolation; 1) <2>2 represent a partial letter in Diogenes (1321 011, 18.col2.14); 2) <2 and >2 represented by « and » in Fragmenta Alchemica (1379 001) Status: allowed Usage: in corpus
<3 >3	0361	Combining Inverted Breve → stretching over three or more characters	Definition: combining inverted breve for three or more characters; 1) two or more vowels read as one letter in poetry; 2) represents multiplication in Heron (0559 016, 146.4) and Aëtius (0718 001, 139.6); 3) unknown use at Heraclides (1844 001) Status: allowed Usage: in corpus See also: %182
<4 >4	035C	Combining Breve Below → stretching over three or more characters	Definition: combining breve below for three or more characters; 1) two or more vowels pronounced as one letter in poetry; 2) mark used to indicate link between two parts of a compound word; 3) musical character indicating a single syllable to be sung on two notes; 4) mathematical character in Scholia in Euclidem Status: allowed Usage: in corpus See also: %96
<5 >5	035D	Combining Breve → stretching over three or more characters	Definition: combining breve for three or more characters Status: allowed Usage: in corpus See also: %27, %183
<6 >6	vertical-align: super	Superscript	Definition: superscript text Status: allowed Usage: in corpus
<7 >7	vertical-align: sub	Subscript	Definition: subscript text Status: allowed Usage: in corpus
<8 >8	0333	Combining Double Underline	Definition: double underline Status: allowed Usage: not in corpus
<9 >9		Textual Lemma	Definition: marks up textual lemmata in lexica, glossaries and grammars. This tag is used to mark lemmata as opposed to quotes (preferably marked with {3}). TLG Display: bold Status: allowed Usage: in corpus See also: {3}
<10 >10	markup	Stacked Text – Lower Text	Definition: stacked text. <10 and >10 mark up the lower text; <11 and >11 mark up the upper text. Stacked text may indicate e.g. abbreviations, mathematical characters, variant readings in the manuscript. Occasionally introduced by the TLG for display of variant readings in the manuscript. Status: allowed Usage: in corpus

¹⁶ 2035 is the preferred character for Left Interlinear Text Marker Bracket. 0027 Apostrophe is vertical and does not have a matching character to act as an opening bracket. 00B4 Acute Accent and 02CA Modifier Letter Acute Accent would be visually confusing and are at the wrong angle. 02B9 Modifier Letter Prime does not have a matching pair in the vicinity where as 2032 does.

2032 is the preferred character for Right Interlinear Text Marker Bracket. 0060 Grave Accent and 02CB Modifier Letter Grave Accent would be visually confusing and are at the wrong angle.

Thesaurus Linguae Graecae – Beta Code Manual

Beta	Unicode	Name	Information
<11 >11	markup	Stacked Text – Upper Text	Definition: stacked text. <10 and >10 mark up the lower text; <11 and >11 mark up the upper text. Stacked text may indicate e.g. abbreviations, mathematical characters, variant readings in the manuscript. Occasionally introduced by the TLG for display of variant readings in the manuscript. Status: allowed Usage: in corpus
<12 >12	markup	Text Printed In Non-Standard Direction	Definition: marks up text which is printed in any direction except that which is standard for the current script. E.g. Greek text printed from right-to-left; Latin text printed diagonally from lower left to upper right; Hebrew printed vertically from top to bottom. Most commonly marks up text written vertically or diagonally in a table or chart Status: allowed Usage: in corpus
<13 >13		Single Line Spacing in Double Spaced Text	Definition: marks up dispreferred text variants in Historia Alexandri Magni (1386 003) Status: deprecated Usage: in corpus
<14 >14		Interlinear Text	Definition: marks up text which is printed lower than the preceding line but higher than the current line in file Status: deprecated, use <10 and <11 Usage: in corpus
<15 >15		Interlinear Marginalia	Definition: marks up marginalia when their lineation does not correspond to the main text. Status: deprecated, use <2 or <14 Usage: in corpus
<16 >16	2035 2032	Left Interlinear Text Marker Bracket ¹⁷ Right Interlinear Text Marker Bracket	Definition: denote text that is interlinear Status: deprecated, use <2 Usage: in corpus

Thesaurus Linguae Graecae – Beta Code Manual

Beta	Unicode	Name	Information
3.2. [– Brackets			
[]	005B 005D	[]	Definition: 1 either editorial or conjectural additions to the text or deletions from the text. Generally addition in papyrological and epigraphical use. Indeterminate between addition or deletion in codical use ; 2 [] indicates 0 or 1 missing letters, while [] indicates a lacuna of indeterminate length in Philodemus (1595 002) Status: allowed Usage: in corpus
[1]1	0028 0029	()	Definition: 1 parentheses; 2 additions or ‘solutions’ (expansions of abbreviations) in epigraphical use; 3 ‘solutions’ (expansions of abbreviations) in papyrological use (Leiden convention, see Bidez & Drachmann (1938)16) Status: allowed Usage: in corpus
[2]2	2329 232A	< >	Definition: 1 interpolated text in codices and some epigraphical use (Bidez & Drachmann (1938) 12, 16; Maas (1958) 22); 2 additions—lacunae which may be completed by sense—(Leiden convention, see Bidez & Drachmann (1938) 18) Status: allowed Usage: in corpus
[3]3	007B 007D	{ }	Definition: 1 interpolations in papyrological use (Leiden convention, see Bidez & Drachmann (1938) 16); 2 editorial deletions in codices (Maas 1958:22); 3 additions the editor judges not to have been in the archetype in Anonymi in Aristotelis Sophisticos Elenchos (4193) Status: allowed Usage: in corpus
[4]4	27E6 27E7	[[]]	Definition: 1 interpolated text in some epigraphical usage, Bidez & Drachmann (1938) 16; 2 erased text in papyrological use (Leiden convention, see Bidez & Drachmann (1938) 16); 3 conjectural deletions in codices, Maas (1958) 22; 4 scribal deletion in Aeschylus (0085 008); 5 editorial deletions in Anonymus Londinensis (0643 001) and Scholia in Aristophanem (5014 005); 6 conjectural readings by the previous editor in Anna Comnena (2703 001); 7 restitution of a garbled reading in Sextus Julius Africanus (2956 002); 8 either a deletion in the papyri or an interpolation in the manuscripts in Scholia in Aristophanem (5014 008); 9 text absent in the major codices and restituted from elsewhere in Scholia in Aristophanem (5014 012); 10 text from a different archetype to the main text in Scholia in Hesiodum (5025 001); 11 a “logical” deletion of a word in the manuscript in Vitae et miracula Nicolai Myrensis (5067 002) Status: allowed Usage: in corpus

20 2329 is the preferred character for Left-Pointing Angle Bracket. 27E8 Mathematical Left Angle Bracket is reserved for mathematical use. 3008 Left Angle Bracket has incorrect spacing for Latin and Greek scripts. Note: online the TLG represents Left-Pointing Angle Bracket with 003C Less-Than Sign. This is because 2329 is not yet included in many fonts.

21 232A is the preferred character for Right-Pointing Angle Bracket. 27E9 Mathematical Right Angle Bracket is reserved for mathematical use. 3009 Right Angle Bracket has incorrect spacing for Latin and Greek scripts. Note: online the TLG represents Right-Pointing Angle Bracket with 003E Greater-Than Sign. This is because 232A is not yet included in many fonts.

[17]17	230A+ 230A 230B+ 230B	⌞ ⌟	Definition: text quoted directly from Proclus in Isaacius Comemnus (3321 003) Status: allowed Usage: in corpus
[18]18	27EA 27EB	« »	Definition: 1) additions the editor judges to have belonged to the archetype Anonymi in Aristotelis Sophisticos Elenchos (4193); 2) apograph brackets Anonymus Epicureus (1779 001) Status: allowed Usage: in corpus See also: " 7
[20]20	23A7 23AB	{ }	Definition: left curly bracket upper hook Status: allowed Usage: in corpus
[21]21	23AA		Definition: curly bracket extension Status: allowed Usage: in corpus
[21]21	23AA		Definition: curly bracket extension Status: allowed Usage: in corpus

24 There are no Unicode codepoints for the Beta Code Large Square Brackets. 005B and 005D are to be used, but in a larger font size than normal.

25 There are no Unicode codepoints for the Beta Code Low White Corner Brackets. The doubling of 203A and 203B respectively represents a 'best-fit' solution.

26 27EA is the preferred character for Left Double Angle Bracket. 300A Left Double Angle Bracket has incorrect spacing for Latin and Greek scripts.

27 27EB is the preferred character for Right Double Angle Bracket. 300B Right Double Angle Bracket has incorrect spacing for Latin and Greek scripts.

Appendix 2: Beta Code Citation System

In Beta format, a line containing a citation can be identified by its first character, which is always tilde (~). The various levels of citation—called fields—are represented by lower case letters. A letter may be followed by the value which is to be assigned to the field. This value can be numeric (as large as 32000), or expressed by ASCII characters (up to 15), or it can have a null value—which is not the same as zero. If the characters have their ASCII value, they must be contained in quotation marks.

The ID levels a and b are reserved for the citation of the author and work respectively. These levels occur at the beginning of every text and nowhere else, and in the TLG corpus are always a numerical string, consisting of a four-digit and three-digit number respectively. The c level is an optional level—no longer used by the TLG—specifying the preferred abbreviation for a work; this may occur in locations other than the start of the work, if several texts conventionally regarded as different works have been conflated into one (e.g. 0059.038). PHI's d-level, giving the author abbreviation, is not used by the TLG. For example, Apollonius Rhodius' *Argonautica* has the a-c level citations of a = "0001", b = "001", and c = "Arg": ~a"0001"b"001"c"Arg".

The lower levels, n and v through z, are used to cite fields within an individual work. For a given work these behave according to one of two schemes on PHI CDs. The first scheme uses an ~n level to allow non-hierarchical citations; this scheme is not used by the TLG.

In the second, levels v through z are used strictly hierarchically. The field varying most rapidly is always z and denotes the line number; the other levels are used only as needed. The field that varies least rapidly within a work is the high order field, and may signify, for instance, a book or a chapter. So, in the New Testament the x level is the chapter, the y level is the verse, and the z level is the line. The number of levels within a work is constant.

Citations can change explicitly or implicitly. Because of the implicit function, it is seldom necessary to include a full citation for every line of the text. Instead Beta format provides only enough information to show how each line differs from the one before it. A citation changes explicitly when a new value is given after the letter identifying the field. If a field identifier is shown without a value, the value is implicitly incremented; that is, its value increases by one if it is numeral, or its final character is replaced by the next ASCII character if it is non-numeric. All lower fields then are reset to the value 1. Since the z field represents the line number, it is implicitly incremented after every line. The a, b, and c fields reset lower order values to null rather than 1.

Appendix 3: Reserved Escapes

In order to avoid duplication of escape sequences, the TLG® has in the past coordinated its use of escape codes with other similar projects (Duke Documentary Papyri, PHI Latin literary texts and Founding Fathers Project, Greek Epigraphy Project, etc.). The escapes reserved for use by other projects are:

Greek Alphabet

\$50–59 Reserved for Greek documentary papyri
\$60–69 Reserved for Greek inscriptions

Latin Alphabet
